## Fine Lime

Soil Balancing

Cropping

Pasture &amp; Animal

Foliar &amp; Fertigation

AGLIME 250 is made from high quality limestone (calcium carbonate) which is locally quarried and processed

### Description

AGLIME 250 improves crop and pasture yields by neutralising acidic soils. Application of finely crushed limestone is the only practical way to neutralise soil acidity. Lime is proven to increase yields.

Use of agricultural lime can provide measurable benefits and increased returns. Lime combats the effects of soil acidity.

### Benefits

#### FINENESS

For agricultural lime to be effective it should not be measured and compared on purity alone, but also on particle size.

The finer the particles of lime, the faster they react with the soil. Finer lime has greater soil contact and increased solubility and distribution properties.

To possess effective solubility and fast response time a passing of 97-99% at 250 microns is recommended
